3. BACKGROUND AND DESCRIPTION

The 540-acre Cane Creek Reservoir, completed in 1989, is located near N.C. Highway 54 about 11 miles west of Carrboro and can store approximately 3 billion gallons (BG). Cane Creek Reservoir serves as the primary water source for the Jones Ferry Road Water Treatment Plant (WTP), and typically supplies approximately 75% of the raw water. Located at the Cane Creek Reservoir is the Cane Creek RWPS that pumps raw water to the WTP via a 24-inch and 30-inch ductile iron raw water transmission main. The RWPS is connected to the reservoir with a 42-inch tunnel through the dam and a 30-inch pipe to the RWPS.

The two existing 4160 volt raw water pumps and motors are original to the facility and operated by original motor starters and electrical gear (circa 1989). Water is pumped from the Cane Creek Reservoir by the two 2-speed pumps, each originally capable of delivering 12 MGD at high speed, and 6 or 8 MGD at low speed. For pump 1, the low speed is 300 hp and the high speed is 700 hp. For pump 2, the low speed is 150 hp and the high speed is 700 hp. The pumps are not configured to operate simultaneously. In 1997, a trailer mounted 1135 kW generator was installed. In 2022, a solar field was installed that also supplies 4160 volt power to the RWPS.
